

# KCJ Moves Quality Education Online

## We're taking learning online

### Code Club

For kids who want to keep coding at home, Code Club Canada will be leading [online hangouts](#) in place of in-person meetups. Kids, care-givers, and educators are all welcome to join as our certified instructors walk you through fun activities and challenges. We'll be covering a different activity each week so kids will have plenty to do with while school is out. They can even invite their friends to join!

## Learning from home

[Resources](#) - A treasure-trove of activities for coders of all levels. Broken down into simple steps, these projects are accessible for all levels, even first time coders.

[The Algorithm Literacy Project](#) presents a fun, educational video and two guides to walk kids through the world of algorithms, how they work, and how they impact our lives through activities.

Follow along with our [micro:bit tutorial series](#) of videos on YouTube! We cover everything from music to basketball. Don't have a micro:bit? No sweat, there's a free emulator!

Are you more into games? Check out our micro:bit arcade and get a high score in our [Valentine's Day game](#) or [Pong](#).
